

LOADING THE MOST RECENT LEAGUE FILE

If your league file is out of date, download and unzip the latest copy. This is done as follows:

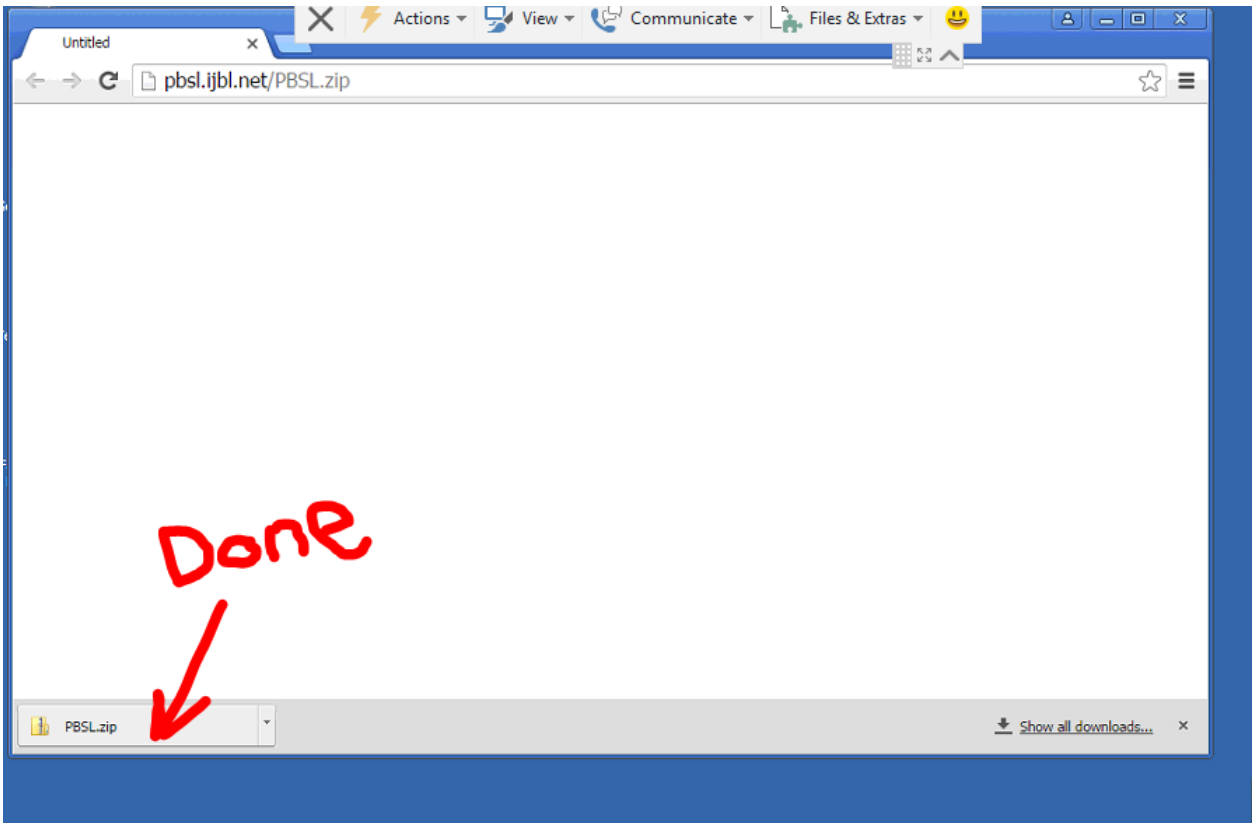

1. Close Fast Break Basketball by pressing the Exit button in the upper right (when asked to save hit "no").

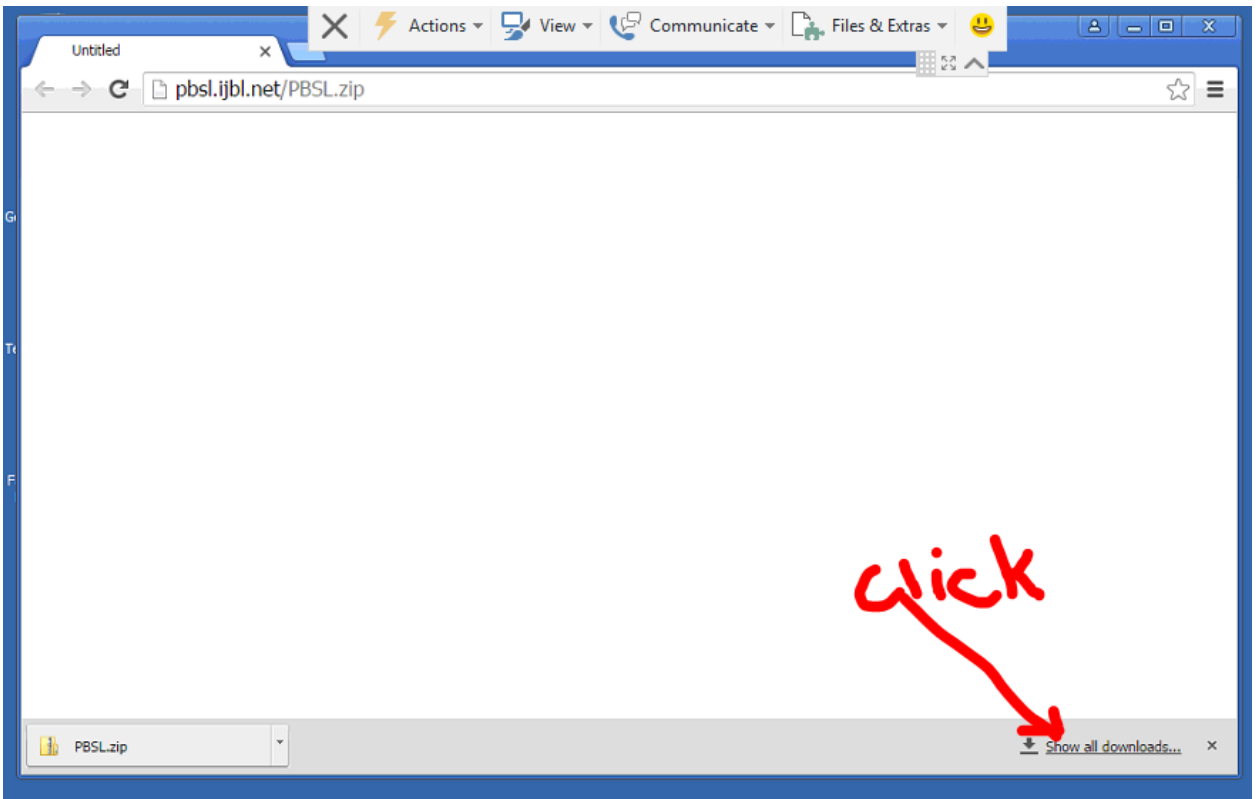

2. Double-click on the link to the PBSL.zip file on your desktop. This will download the most recently published version of the league files. The settings have been customized to download this right where it needs to go.

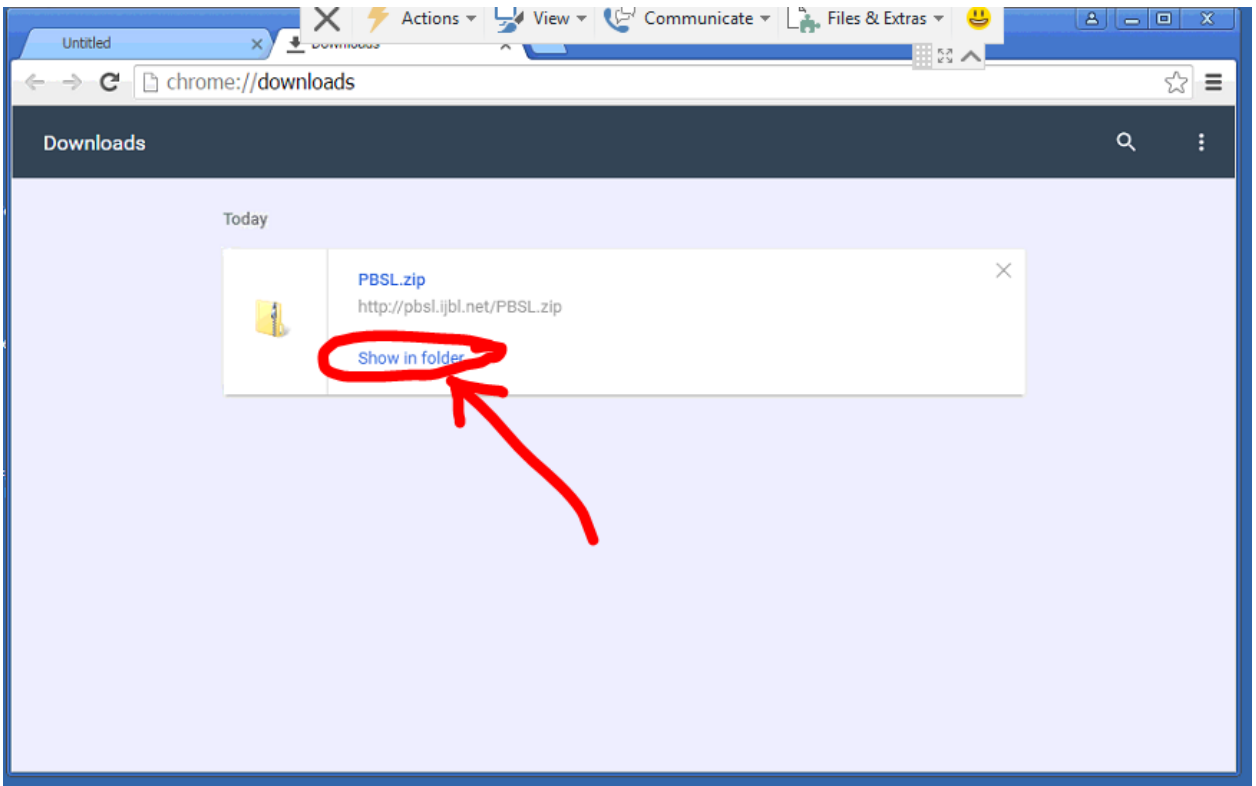

3. A Google Chrome browser window will open. Wait until the PBSL.zip file has completed its download in the lower-left corner.

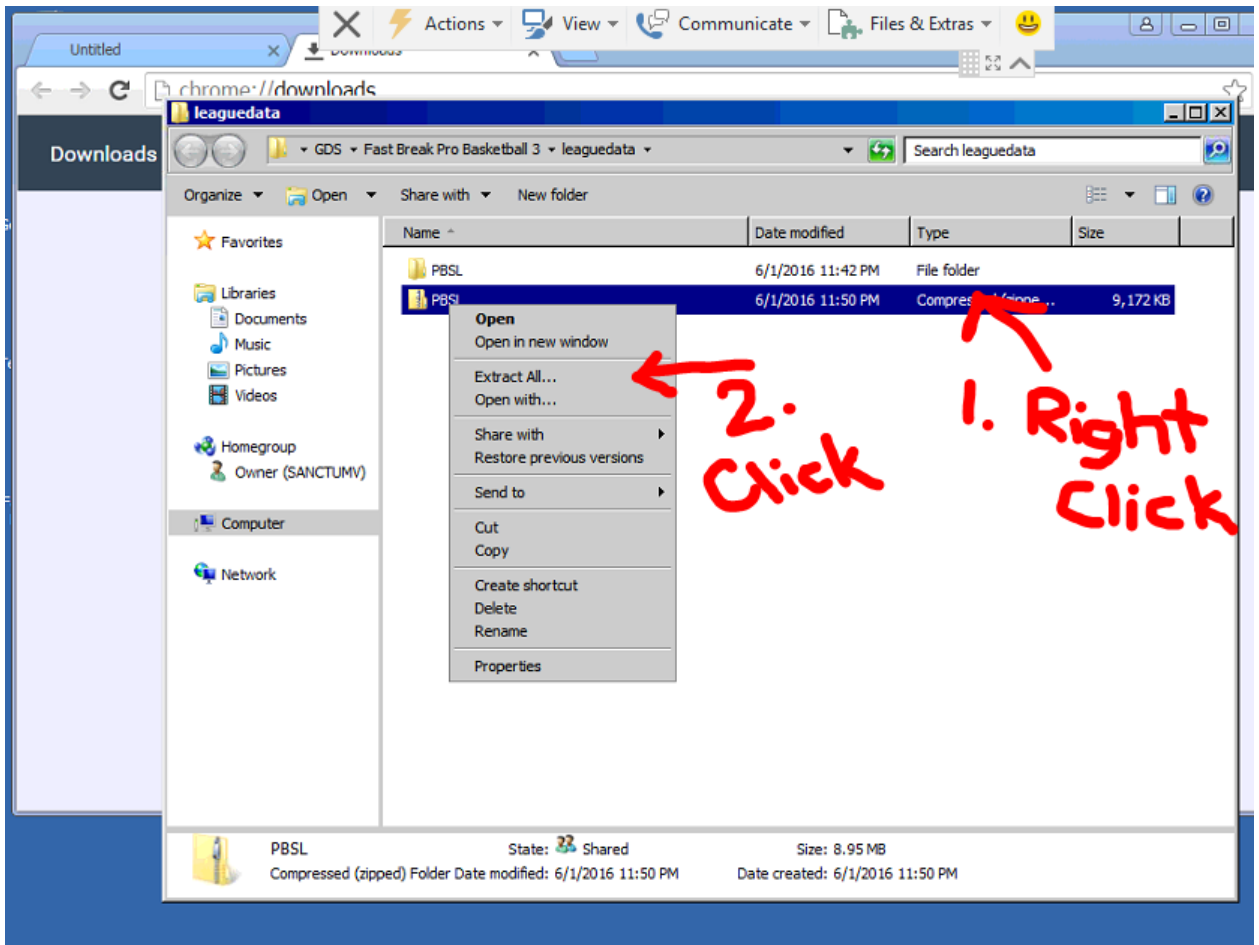

4. Click the “Show all downloads...” button in the lower right

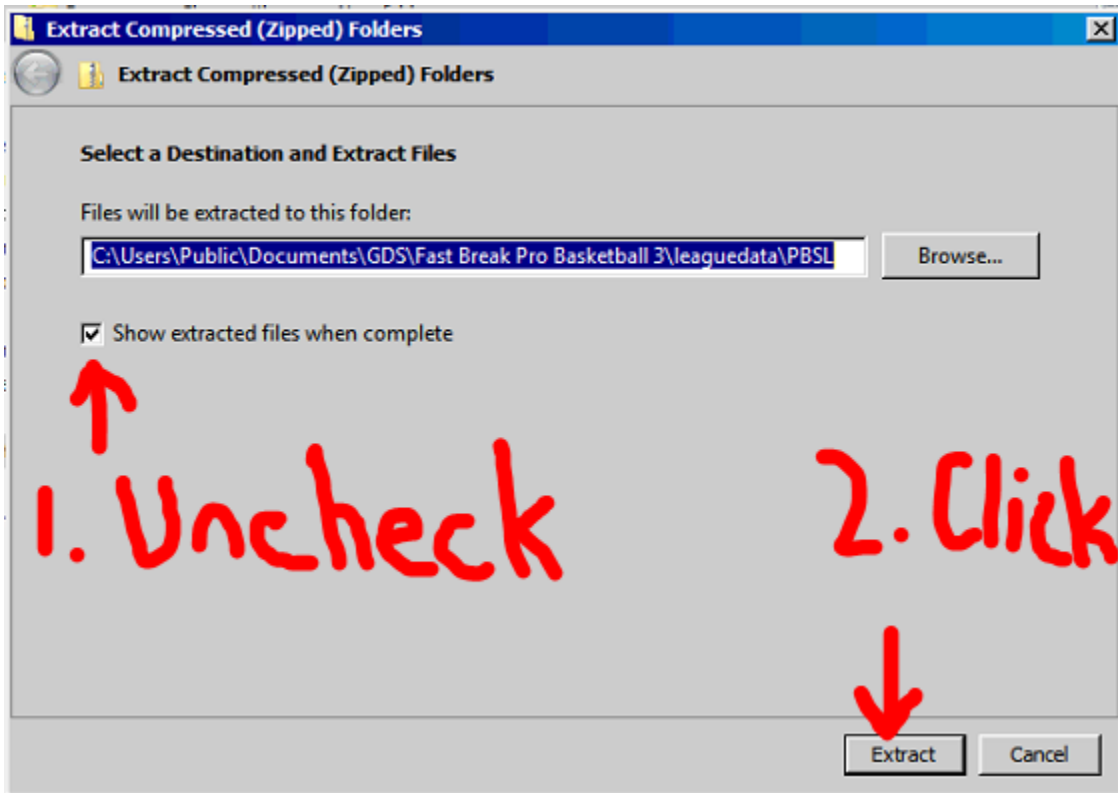

5. Click the “Show in Folder” link below the PBSL.zip file

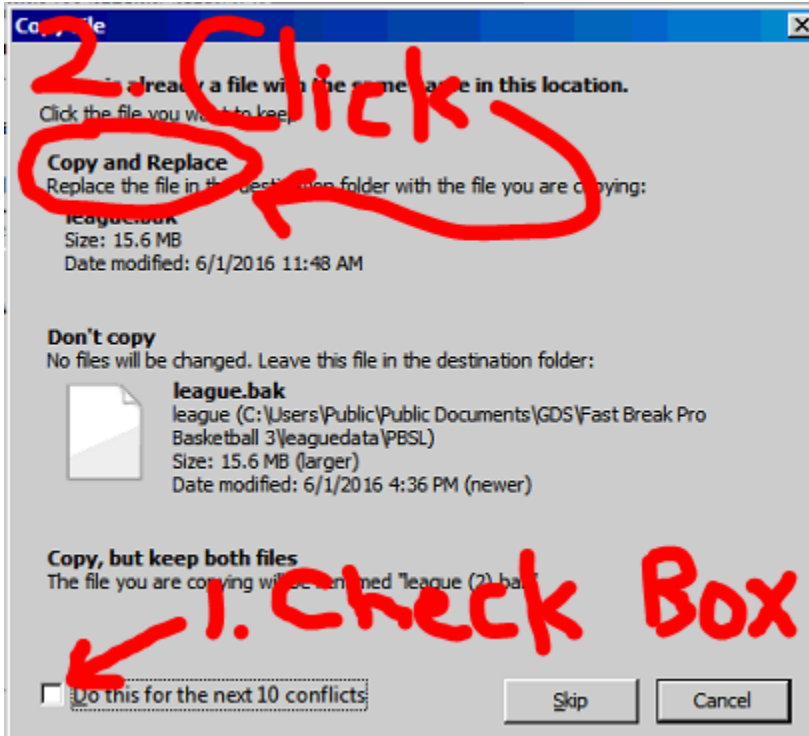

6. Right click on the PBSL.zip Compressed File Folder in the box that opens (not the “PBSL” folder that is not a Compressed File), then select “Extract All” from the menu that opens.

7. Uncheck the “Show extracted files when complete” box and then click “Extract”

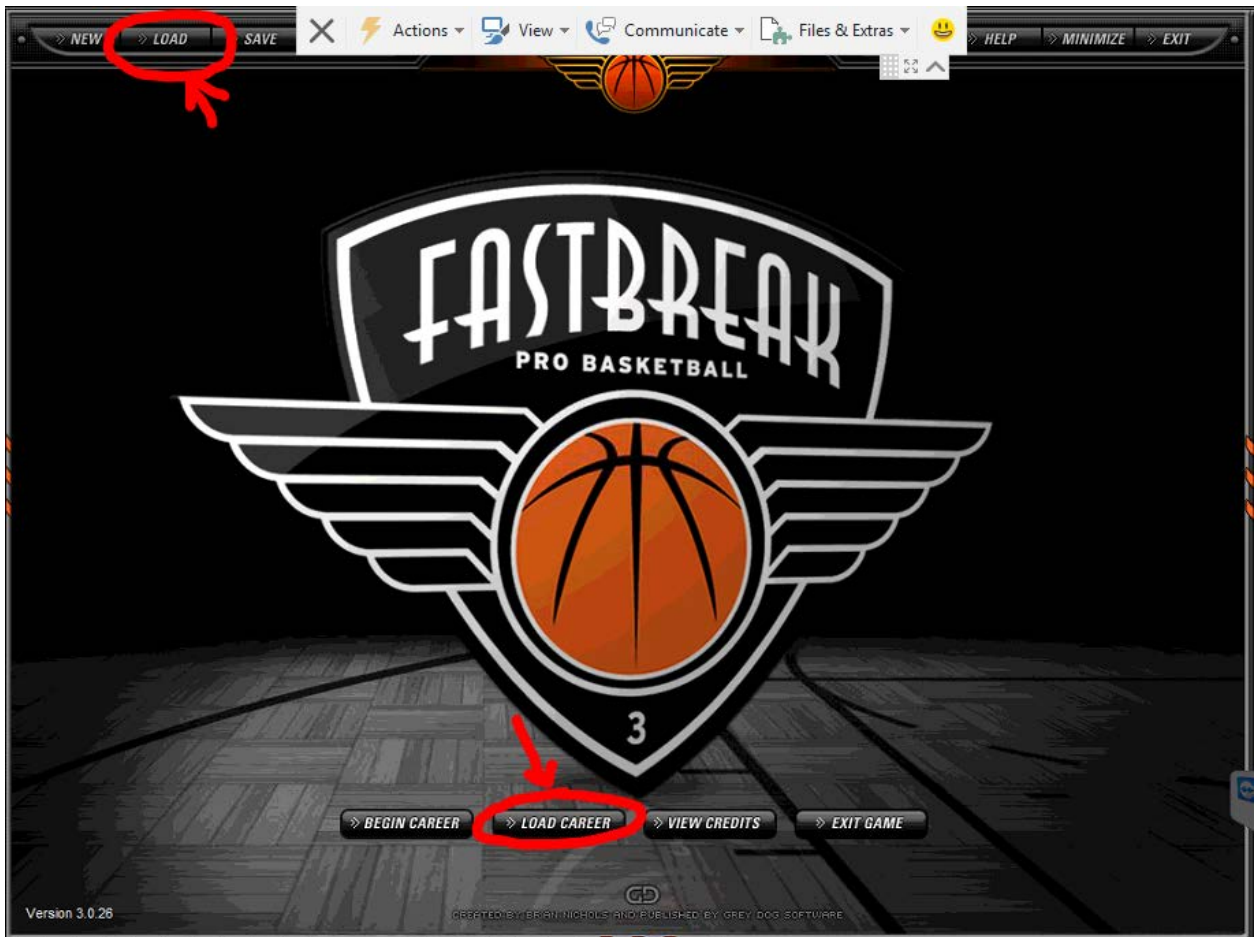

8. Check the Box for “Do this for the next (number) conflicts” then click “Copy and Replace”

9. When done, delete the .zip file (so the next download will not land "on top of it")
10. Close All Windows
11. Launch Fast Break Pro Basketball 3

12. Click the "Load" button at the top or "Load Career" at the Bottom

13. Load the PBSL league by clicking on it to highlight it (the line will turn light blue) then click the "Load" button in the lower right corner.
